Exceptional Water Conditioning

Crimson[®] adjuvant is a concentrated, ammonium sulfate water conditioner that provides exceptional water conditioning, even in tough hard-water situations. Crimson adjuvant is formulated for use with all glyphosate formulations that require ammonium sulfate. Crimson adjuvant may also be used in other spray applications when the herbicide necessitates ammonium sulphate or ammonium nitrate additives.

FEATURES AND BENEFITS

- Highly concentrated, meaning less volume to handle
- Pre-dissolved to alleviate sedimentation & nozzle plugging
- Antifoaming agent formulated into the product

Help prevent micronutrient antagonism

Many spray waters contain calcium, iron, potassium, sodium, and magnesium ions that tie up (antagonize) herbicide active ingredients such as glyphosate and glufosinate. Micronutrients also can antagonize glyphosate. AMS conditions the water to prevent hard-water and micronutrient antagonism.

REGION
All

USE RATE[†]
1-1.5 litre/100L spray solution for standard use.

2-2.25 litre/100L when using foliar micronutrients or under extreme environmental conditions

APPLICATION GUIDE[†]
Add & Agitate spray solution prior adding glyphosate

ACTIVE INGREDIENTS[†]
50%: Ammonium Sulphate, and proprietary blend of water conditioning, coupling, and antifoam agents
50%: Other Constituents

PACKAGING
2 x 10 litre jugs
450 litre tote

[†] Always read and follow product labels directions.
