

MAX-IN™ Copper

By WINFIELD UNITED

Foliar Micronutrient with MAX-IN™ Technology

MAX-IN™ Copper is an effective foliar-applied source of copper that contains MAX-IN technology to greatly increase the movement of micronutrients through the leaf cuticle and into internal structures.

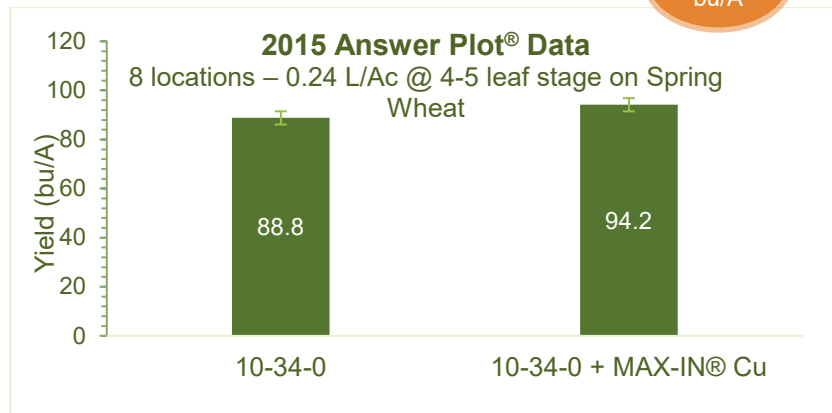

FEATURES AND BENEFITS

- Contains MAX-IN technology, designed to increase humectancy to make more of the applied nutrient available for plants.
- Can be used in a broad spectrum of crops, and is easily mixed with most other crop nutrients and crop protection products.

Plant Health Benefits

Copper is essentially immobile in soils because it binds tightly to organic matter, but it is essential for pollination and pollen tube formation. Copper is involved in cell wall formation, and is necessary for protein synthesis. It also helps activate several enzyme systems and cannot be replaced by other metals.

Results

Feed the Hidden Hunger

Tissue sampling and analysis at key growth stages can help pinpoint nutrient deficiencies before yield potential is reduced.

WinField® United Plant Nutrition

WinField United plant nutrition provides high-quality plant nutrients for healthy plants and optimal yields. These proven, versatile performers are specially formulated to meet the nutritional needs of crops across a broad range of soil conditions, fertility programs and tillage practices.

- REGION**
All
- USE RATE†**
Most crops: 0.24-0.3* L/ac
- APPLICATION GUIDE†**
Wheat: Between tillering and early joint.
Corn: V3-V8
- ACTIVE INGREDIENTS†**
5.0%: Copper
- PACKAGING**
2 x 10 L
450 L

† Always read and follow product labels directions.

*A second application may be needed. See label for other listed crops and rates of application.
