

MAX-IN™ Ultra Manganese

By WINFIELD
UNITED

Foliar Micronutrient with MAX-IN™ Technology

MAX-IN Ultra Manganese is an effective foliar-applied source of boron, which is vital for plant health and growth. MAX-IN products contain MAX-IN technology to greatly increase the movement of micronutrients through the leaf cuticle and into internal structures.

FEATURES AND BENEFITS

- Contains MAX-IN technology, designed to increase humectancy to make more of the applied nutrient available for plants.
- Helps plants absorb manganese to better optimize crop production, as boron influences nitrogen metabolism and carbohydrate utilization.
- Manganese plays a key role in a plant's immune system to increase resistance or tolerance to plant diseases.

Compatibility

MAX-IN Ultra Manganese mixes easily with other crop nutrients and most crop protection products, including glyphosate based herbicides. When MAX-In Manganese is tank mixed with glyphosate, an ammonium sulfate source such as Crimson® adjuvant should always be used.

Feed the Hidden Hunger

Tissue sampling and analysis at key growth stages can help pinpoint nutrient deficiencies before yield potential is reduced, so you can apply exactly what your crop needs, when it needs it.

WinField® United Plant Nutrition

WinField United plant nutrition provides high-quality plant nutrients for healthy plants and optimal yields. These proven, versatile performers are specially formulated to meet the nutritional needs of crops across a broad range of soil conditions, fertility programs and tillage practices.

REGION
All

USE RATE†
Most crops: 1-2* L/ac

APPLICATION GUIDE†
Foliar.
Soybeans: V3 to V5

ACTIVE INGREDIENTS†
5.0% Manganese

PACKAGING
2 x 10 L
450 L tote

† Always read and follow product labels directions.

*A second application may be needed. See label for other listed crops and rates of application.
