

N-Pak[®]

Liquid Ammonium Sulfate Solution

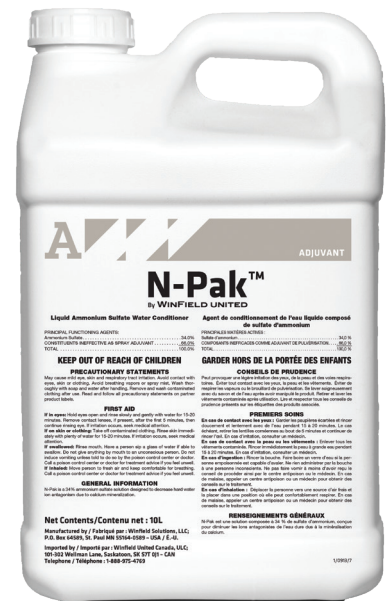

A liquid ammonium sulfate solution that maximizes the performance of post-emergent herbicides under adverse growing conditions.

FEATURES AND BENEFITS

- Increases herbicide performance.
- Increases absorption into the plant's phloem through the leaf cuticle.
- Decreases herbicide antagonism due to cations, such as calcium, ion mineralization.

Mixing Instructions

Shake well or recirculate before use. Fill sprayer to 1/2 full of water. Add N-Pak to the agitating spray tank, add dry flowables or dispersible granules, add emulsifiable concentrates, and continue to agitate until tank is full.

ADJUVANT

REGION

All

USE RATE

Use at a rate of 1.25% - 5.0% v/v depending on water quality.

APPLICATION GUIDE

Add & agitate spray solution prior adding glyphosate

PACKAGING

2 x 10 L

ACTIVE INGREDIENTS

Ammonium Sulfate 34%
Constituents ineffective as adjuvants 66%
