Herbicide Group: Group 1
Active Ingredient: Clodinafop-propargyl 240 g/L
Pack Size
3.68 L jug + 4 L of adjuvant
7.36 L jug + 8 L of adjuvant

Cadillac™

A post emergence herbicide for control of wild oats, volunteer (tame) oats, green foxtail, yellow foxtail, barnyard grass, persian darnel and volunteer canary seed in spring wheat and durum wheat.

Cadillac™ is absorbed by the leaves and is rapidly translocated to the growing points of leaves and stems. Actively growing susceptible grasses stop growing within 48 hours of treatment. Depending on species, growing conditions and crop competition, leaves and growing points turn yellow within one to three weeks after application. Further colour changes and loss of vigour will be observed, followed by a browning and complete control three to five weeks after application.

Benefits of Using Cadillac™:

- Can be tank-mixed with a wide range of broadleaf tank mix options to provide broad spectrum weed control in wheat.
- Can be used in all varieties of spring wheat and durum
- Easy to use. Conveniently packaged in either a 40-acre case that contains 3.68 litres of Cadillac™ and 4 litres of adjuvant, or an 80-acre case that contains 7.36 litres of Cadillac™ and 8 litres of adjuvant.
- Wide window of application timing
- Rainfast in 30 minutes

For use on:
Spring wheat and durum

Application Window:
Apply when grassy weeds are anywhere from the 1 to 5 leaf stage, prior to the emergence of the fourth tiller. For control of volunteer oats, apply at the 3 to 6 leaf stage. For wild oats, apply at the 1 to 6 leaf stage, up to emergence of the fourth tiller.
