

Dialed-In®

Deposition Aid & Drift Control Agent

Dialed-In adjuvant is specifically designed for ultra and extra coarse nozzles, such as TeeJet® TTI. It has been formulated to reduce the amount of driftable fine droplets which may contribute to enhanced canopy penetration of spray solution and allow for more active ingredient to reach the intended target.

FEATURES AND BENEFITS

- Innovative technology option for soybean growers.
- Increased drift control improves coverage with ultra and extra course nozzles.
- Reduction in driftable fines aids in more active ingredient reaching the target.
- Anti-foam formulation for added convenience.

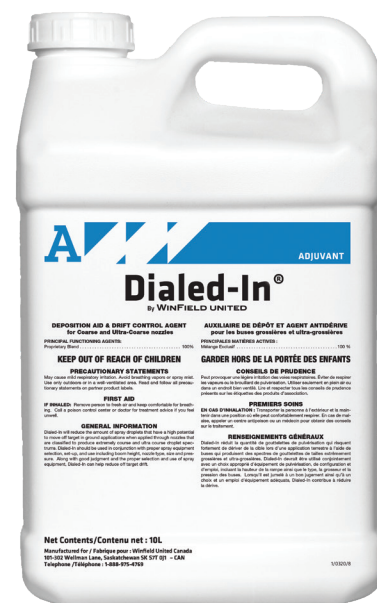

Versatile Drift Reduction and Deposition

- Use with ultra-course nozzles such as TeeJet TTI.
- Apply at a pressure greater than 30 psi. 40-60 PSI is optimal.
- Tank-mix in spray solution with 15 gallons/ac of water.

Water Volume Table

Gallons of Water	mL/acre of Dialed-In	ac/10 L jug
10	189 mL	52 ac
15*	284 mL	35 ac
20	378 mL	26 ac

*Recommended water use rate
