

Destination™

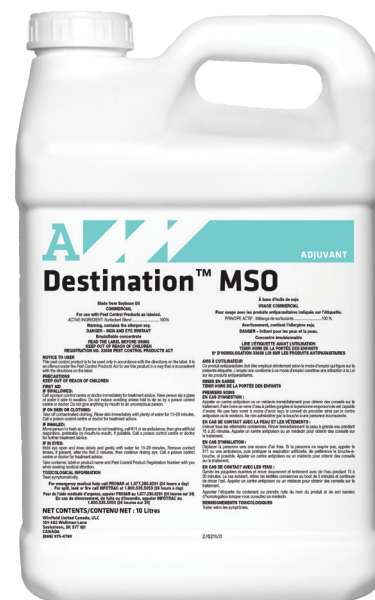

By WINFIELD UNITED

Increases herbicide uptake for improved performance

Destination™ is a concentration of methylated soybean oil and surfactants which incorporates unique technology for increased pesticide uptake and effectiveness. Destination is a class of adjuvants called High Surfactant Oil Concentrate (HSOC). HSOC are used to help breakdown waxy leaf surfaces and let herbicides penetrate the leaf.

FEATURES AND BENEFITS

- High surfactant oil concentrate formulation allows for quicker and more complete uptake and absorption of herbicides into weeds compared to traditional crop oil concentrates and nonionic surfactants applied alone.
- Helps improve the performance of contact or desiccant type herbicides as well as most grass herbicides.
- Helps herbicides perform when weeds are under stressful, hot, dry weather conditions.

REGION

All

USE RATE

0.5% v/v = standard use

1.0% v/v = extreme environmental conditions or with desiccants.

PACKAGING

2 x 10 L

ACTIVE INGREDIENTS

Blend of methylated soybean oil and surfactants

Always read and follow label directions.
